

Sr.No.	Investigations done	Key Findings
O1	CBC, URINE ROUTINE	WNL
02	USG	SINGLE LIVE INTRAUTERINE GESTATION OF AGE 23 WEEKS 3 DAYS WITH NO ANOMALY NOTED AT PRESENT SCAN.

13 Additional findings and observations: Amniocentesis done at K Pond Children's Super Speciality Hospital. On amniocentesis fetus is likely to be affected with spinal muscular atrophy, due to the homozygous deletion of exon 7 and 8 on SMN1 GENE.

14 Physical Fitness for termination: Yes.

15 Recommendations by Medical Board for termination: There is a substantial risk to the foetus if born.

A Recommended: She is a case of previous Caesarean section. There is a possibility of need of a Caesarean section again this time during termination. The said risk is more and above the usual risk involved. The risk involved has been explained to the patient and her husband.

3 The Expert Committee has recommended medical termination of pregnancy of petitioner no.1. It is further opined that there is substantial risk to the foetus, if born. She is a case of Caesarean section. The Expert Committee has further opined that there is possibility of need of a Caesarean section again this time during termination. The said risk is more and above the usual risk involved. The risk involved has been explained to

petitioners no.1 and 2.

4 The learned Counsel for the petitioners submits that petitioners are explained about the risk involved and petitioner no.1 wants to proceed further with the termination of pregnancy.

5 In the light of that, petitioner no.1 is permitted to terminate her pregnancy at Government recognised Centre.

6 Writ Petition is disposed of. No costs.

Copy of this order, duly authenticated by the Sheristedar of this Court, may be supplied to the learned Counsel for the petitioners.
